

INFORMATION REQUEST - MEDICATION STORAGE GUIDELINES

Request Information

Date: 2025-09-01

From: Robert Chen, PharmD

Organization: Riverside Medical Center

Phone: (555) 234-5678

Email: robert.chen@riverside-medical.org

Urgency: Medium

Preferred Response: Written document or reference links

Subject

Request for clarification on insulin product storage requirements

Specific Questions

We are updating our pharmacy's cold chain management protocol and need authoritative guidance on the following insulin products:

1. Lantus (insulin glargine) - opened vials
2. Humalog (insulin lispro) - opened pens
3. NovoLog (insulin aspart) - unopened cartridges

Questions:

- a) What is the maximum room temperature for storage after opening?
- b) What is the discard date after first use for each product?
- c) Are there any stability studies supporting extended use beyond manufacturer guidelines?
- d) How should we handle insulin that has been at room temperature for an unknown duration?
- e) What documentation is required for cold chain deviations?

Context

Our current policy references USP <797> but we want to ensure alignment with latest manufacturer recommendations. We serve a rural patient population where patients may have limited access to replacement insulin supplies.

We would also appreciate any guidance on:

- Patient education materials for home storage
- Documentation requirements for regulatory compliance
- Emergency protocols for cold chain failures
