Subject

Questions about platform capabilities for clinical trial support

Background

We are a Phase III clinical trial for a new diabetes medication (Protocol #SC-2025-DIAB-001) evaluating your platform for adverse event report management and classification.

Questions

1. Can your platform handle electronic informed consent documents?
2. Do you support integration with REDCap for data capture?
3. What formats do you accept for adverse event reports?
4. Can the classification system be customized for trial-specific categories beyond the standard healthcare categories?
5. What is the API rate limit for batch document processing?
6. Do you support multi-language document processing?
7. What audit trail capabilities are available for regulatory compliance (21 CFR Part 11)?
8. Can the system generate expedited safety reports (CIOMS forms)?

Requirements

- FDA 21 CFR Part 11 compliance
- HIPAA-compliant data handling
- Real-time classification with <2 second response time
- Support for 10,000+ documents per month
- Integration with existing REDCap instance
- Custom classification categories for trial-specific events
